No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                1 MNSYKNKNEYEMLDALRINS.....TFPNQSLEKREQEVNDLFIN 682

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for associated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300
                                                                                                                                                                                                                                                                                                                                       isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

```
endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin.

sessociated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin-associated proteins or nucleic acids in products or organisms.
                                                                                                                                                                                                                                                                                                                                                New isolated delta-endotoxin and delta-endotoxin-associated nucleic acids and polypeptides, useful for killing lepidopteran or coleopteran pests or for producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GCAAAAAGATCCACAAATGACTATGCGAAACACGAACTATAAAAGAATGGCTAAATATGTGT 120

```
This sequence encodes an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for associated proteins that have pesticidal activity, or for delta-endotoxin or delta-endot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated delta-endotoxin and delta-endotoxin-associated nucleic acids and polypeptides, useful for killing lepidopteran or coleopteran pests or for producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ä

The present invention relates to a new pesticidal polypeptide. The invention is useful for impacting an insect pest by applying the the molecules of the invention to the environment of the insect pest by spraying, dusting, broadcasting, or seed coating, where the insect pest is selected from Colorado potato beetle, western corn roctworm or pouthern corn roctworm. The invention is also useful for increasing insect target range and for producing transgenic microorganisms and plants that express the pesticidal polypeptide. The invention is also useful for producing transformed plants and in transforming any organism to produce the pesticidal polypeptide of the invention. The present nucleic acid sequence encodes a Bacillus thuringiensis wild-type Cryl218
                                               isolated pesticidal polypeptide useful for impacting insect pest e.g.

of the alteration of at least one proteolytic site, where the stabflity of the endotoxin in an insect gut is increased relative to an endotoxin lacking the mutation. The endotoxin of the invention may be useful for providing improved pesticidal activity against insect pests whilst the compositions of the invention may be useful in agriculture for controlling pests, including plant pests. The current sequence is that the a DNA related to Bacillus thuringiensis strain 1218 Cry8-like deltaendotoxin Cry1218 of the invention.

cransformed plant (III) a stably incorporated with the expression cassette in its genome, a transformed seed of the plant and an isolated pesticidal polypeptide (IV) having proteclytic activity (and comprising an engineered protection site, which is not sensitive to the plant protease and protects the pesticidal polypeptide from proteolytic inactivation in a plant). The pesticidal polypeptide is Cry8Bbi toxin or its variant or fragment, where the variant and the fragment have pesticidal activity and the variant has at least 70 % sequence identity to an amino acid sequence for the Cry8Bbi toxin. The nucleic acid and/or expression cassette are useful for protecting a plant from a pest, where expression of the nucleic acid and/or expression cassette and variant and where the produces the pesticidal polypeptide in the plant, and where the pesticidal polypeptide in the plant from the pest. The plant corporate a cysteine protease. The pest is chosen from Colorado potato beetle, Western corn roctworm, Southern corn roctworm, and boll weevil.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       162

comprise a cleavage site that is sensitive to a plant protease (within the plant), where expression of the construct produces the insect protocxin in the plant, where cleavage of the protoxin by a plant protease (within protoxin in the plant, where cleavage of the protoxin by a plant protease produces an active insect toxin and where the active insect toxin is produces an active insect toxin and where the active insect toxin is protocxin, an isolated nucleic acid molecule comprising a nucleotide sequence encoding the insect protoxin, an isolated nucleic acid molecule comprising a nucleotide sequence encoding a Cry8-like insect protoxin, impacting an insect pest of a plant comprising providing a transgenic plant that comprises in its genome a stably incorporated polynucleotide construct and a composition comprising at least one insect protoxin in combination with a carrier. The composition is useful for impacting insect pests (e.g. Colorado potato beetle, western corn rootworm, southern corn rootworm or boll weevil) on plants (e.g. monocot (maize) or dicot). The conjunction with endogenous plant or insect gut proteases) are effective in pest management strategies. This sequence represents Bacillus thuringlensis Cry8Bbl protoxin DNA of the invention. 888888888888888888888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IleValAspAsnPhePheGluLysAsnMetProLysPheLysGluArgAsnPheGluIle 198
spraying, dusting, broadcasting, or seed coating, where the insect pest is selected from Colorado potato beetle, western corn rootworm or southern corn rootworm. The invention is also useful for increasing insect target range and for producing transgenic microorganisms and plants that express the pesticidal polypeptide. The invention is also useful for producing transformed plants and in transforming any organism to produce the pesticidal polypeptide of the invention. The present nucleic acid sequence encodes a Bacillus thuringiensis wild-type Cry1218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ||||

2723 ACATATGAAGCGGAACAAGATTTAGAAGCAGCGAAGAAAGCAGGGAGTGAATGCCTTGTTTAGG 2782 itiais de la composita della composita della composita della composita della c The invention relates to a novel endotoxin having a mutation consisting of the alteration of at least one proteolytic site, where the stability of the andotoxin in an insect gut is increased relative to an endotoxin lacking the mutation. The endotoxin of the invention may be useful for providing improved pesticidal activity against insect pests whilst the compositions of the invention may be useful in agriculture for controlling pests, including plant pests. The current sequence is that of the a DNA related to Bacillus thuringiensis strain 1218 Cry8-like delta-endotoxin Cry1218 of the invention. New endotoxin comprising a mutation consisting of the alteration of at least one proteolytic site, where stability of the endotoxin in insect gut is increased, useful for providing improved pesticidal activity. The invention relates to an isolated mucleic acid molecule comprising a nucleotide sequence encoding a pesticidal polypeptide having an confineered protecolytic protection site, which is not sensitive to the plant protecase and protects the pesticidal polypeptide from protecolytic inactivation in a plant. Also included are protecting (MI) a pesticidal polypeptide from protecolytic inactivation in a plant (Comprising altering a protecolytic site within the pesticidal polypeptide that is sensitive to a protecolytic protection site, where the corrects the pesticidal polypeptide from protecolytic protection in a confirmation of plant protection site is not sensitive to the plant protease and protects the pesticidal polypeptide from protecolytic inactivation in a collarl, an expression cassette (II) a stably incorporated with the expression cassette in its genome, a transformed seed of the plant and an isolated pesticidal polypeptide (IV) having protecolytic activity (and comprising an engineered protecolytic protection site, which is not sensitive to the pesticidal polypeptide from protecolytic cinactivation in a plant). The pesticidal polypeptide is CryBBb1 toxin or its variant or fragment, where the variant and the fragment have controlled and activity and the variant has at least 70 % sequence identity to an amino acid sequence for the CryBBb1 toxin. The nucleic acid and/or expression cassette are useful for protecting a plant from a peet, where expression cassette in the plant
                                                                                               681
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    I isolated nucleic acid molecule having nucleotide sequence encoding icidal polypeptide comprising engineered proteolytic protection site stant to protease, useful for protecting plant from pest e.g.

                                           potato
produces the pesticidal polypeptide in the plant, and where the pesticidal polypeptide protects the plant from the pest. The plant protease is a cysteine protease. The pest is chosen from Colorado potat. beetle, Western corn rootworm, Southern corn rootworm, and boll weevil. The present sequence is the genomic DNA for a wild-type Bacillus thuringiensis Cry8-like toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1253 ATCCTGGATAGTTTATTTACGCAATATATGCCATCTTTTAGAGTGACAAATTTTGAAGTA

AAT43221-T43223 represent the coding sequences for toxins that are active against scarab pests. This sequence was isolated from the Bacillus thuringiensis strain kumanotoensis. Insects in the family Scarabaeidae constitute a serious pest control problem, especially when destructive larval stage insects infest high value turf found in golf courses, playing fields and lawns. The larvae are known as white grubs, or chafer grubs, and ornamentals. The larvae are known as white grubs, or chafer grubs, and can be found in decaying organic matter, or in the soil where they consume plant roots. In Europe and the U.S. populations of these larvae and adults have developed resistance to chemical insecticides such as the organochlorines and DDT. The toxins encoded by these sequences, and intact cells that are capable of expressing the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a crystalline protein comprising a fully defined sequence and the nucleotide sequence encoding this protein. The protein of the invention is an agent for preventing harmful organisms comprising Bacillus thuringienes servors galleriae SDS502, its mutant or a microbe transformed by a DNA encoding the protein. This microbe can be used to produce a protein containing the protein. This microbe can be a transformed microbe, a microbe which is transformed by using the above DNA and produces the above protein having insecticidal activity produced by the SDS502, its mutant or a transformed microbe, a microbe which is transformed by using the above DNA and Bacillus thuringiensis servors galleriae SDS502 producing a protein comprising and producing a protein showing insecticidal activity. The protein of the invention may have insecticidal activity. The agent is used for preventing Coleoptera larvae. This sequence represents the CDNA encoding the Bacillus thuringiensis insecticide protein of the invention
                                                                                                                                                                        1971

The invention is useful for impacting an insect pest by applying the the molecules of the invention to the environment of the insect pest by spraying, dusting, broadcasting, or seed coating, where the insect pest is selected from Colorado potato beetle, western corn rootworm or southern corn rootworm. The invention is also useful for increasing insect target range and for producing transgenic microorganisms and plants that express the pesticidal polypeptide. The invention is also useful for producing transformed plants and in transforming any organism to produce the pesticidal polypeptide of the invention. The present nucleic acid sequence encodes a Bacillus thuringiensis wild-type Cry1218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated pesticidal polypeptide useful for impacting insect pest e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a new pesticidal polypeptide. The invention is useful for impacting an insect pest by applying the the molecules of the invention to the environment of the insect pest by applying, dusting, broadcasting, or seed coating, where the insect pest by spraying, dusting, broadcasting, or seed coating, where the insect pest is selected from Colorado potato beetle, western corn roctworm or southern corn roctworm or southern corn roctworm or producing transge and for producing transgenic microorganisms and plants that express the pesticidal polypeptide. The invention is also to produce the pesticidal polypeptide of the invention is also to produce the pesticidal polypeptide of the invention. The present nucleic acid sequence encodes a Bacillus thuringiensis wild-type Cry1218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TCCAATGATTCTAACAGATACCCTTTTGCGAATGAGCCAACAAATGCGCTACAAATATG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LeuMetValLeuValGluGluLeuIleLysLysSerileAspGlnArgValArgGluAsn 139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a new pesticidal polypeptide. The invention is useful for impacting an insect pest by applying the the molecules of the invention to the environment of the insect pest by spraying, dusting, broadcasting, or seed coating, where the insect pest is selected from Colorado potato beetle, western corn roctworm or southern corn roctworm. The invention is also useful for increasing insect target range and for producing transgenic microorganisms and plants that express the pesticidal polypeptide. The invention is also useful for producing transformed plants and in transforming any organism to produce the pesticidal polypeptide of the invention. The present nucleic acid sequence encodes a Bacillus thuringiensis wild-type Cryl18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AsnSerValGlyThrIleLeuSerAsnLeuGlyValProLeuAlaSerGlnSerPheGly 101

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/tissue_type="Glandular trichomes isolated from stem"
/dev_atage="Trichomes were removed from internodes of 8-12
inch tall stems"
/clone_lib="Glandular trichomes"
/clone_lib="Glandular trichomes"
/note="vector: pDNR_LiB: Glandular-haired alfalfa plants
were established in a Conviron growth chamber (16-h days,
full lights, 24oC set point) in 40 one gallon pots. Plants
were grown in Metronix 350 and fertilized with MiracleGro
as needed. They were cut back closely to encourage the
emergence of vigorous shoots. Trichomes were isolated from
stems, approximately 8-12 inchemes lost clipped from plants
2-3 inches above the crown. With minimal handling of the
stem, the apical bud, leaves and nodes were discarded, and
the trichomes isolated from the internode segments."

Consortium/LLANL at: http://image.llnl.gov
Series: IRAK Plate: 65 Row: n Column: 6
This clone was selected for full length sequencing because it
passed the following selection criteria: matched mRNA gi: 27369963
This clone has the following problem: retained intron.
                                                                                                                                                                                                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;
